A simple formula to explain the concept of data security and data integrity

Instructions: Read the text below.

How to write meaningful sentences in order to explain the concept of data security and data integrity: a simple formula to follow.

First, you need to understand your audience. In the past, probably you wrote without having a clear understanding of your audience. They didn't know what the topic was about it. You need to consider what you know about your audience.

Likewise, your audience needs to read and write about data security and data integrity. Now that you know what they want, you need to start with a little research. Consequently, you read and analyze information related to data security and data integrity.

For instance, data security and data integrity are two broad concepts that come from database administration. This is the management of database systems. Data security, regarding databases, is the form to ensure sensitive data, this consist of the assignment and control of users' level of access. Moreover, is the use of monitoring tools to detect a compromise, diversion, or unauthorized changes to database files. When data is exclusive, licensing agreements with both database vendors and content providers may also be required.

Data integrity is associated with data security, since the completeness and accuracy of data can be compromised, stolen or damaged. Therefore, data integrity develops and test procedures for the entry and verification of data (input) as well as verifying the accuracy of reports (output). Data security, as well as data integrity, were not important few years ago. Nowadays, database administrators work with the programming staff in maintaining data integrity. Companies hire businesses to help them to have their data protected in order to satisfy the customer needs. Within the database structure itself, data administrators and the staff maintain the links between data fields and a locking system.

How to Improve Your Writing

When you want to write a letter, an invitation, an essay, a business email or a blog you are looking to do it in a clear and organize way. Improving your writing is as easy as these tips:

1. Lead with your main idea, in other words write your main idea at the beginning.
2. Vary the length of your sentences, if it is an explanation use a long sentence, but if it is an idea, you can use a short one.
3. Put key words to emphasize at the beginning or end of a sentence.
4. Vary sentence types and structures, so you can use some questions or commands in your writing.
5. Use active verbs, the idea is not to abuse the passive voice or the use of verb be.
6. Use specific nouns and verbs that really show what you mean.
7. Cut the clutter, otherwise you will end up with unnecessary words.
8. Read aloud when you revise.
8. Actively edit and proofread your final draft before sending or handing over your writing.
9. Use a dictionary
