Let's Start!

Data Access

Learning Outcome:

Describe common activities at work to a visitor using short sentences in familiar spoken and written situations.
Understand information about data and its structure in simple spoken and written situations.

Can Do Statements:

- I can explain what data accessibility is.
- I can talk about different facts related to data accessibility.
- I can identify important information related to data accessibility.

Ask your partner:

- Do you think there is an important element to have access to data? Why?
- How much time do you think you need to store and update information in a database? Why?

Let's Explore!

The engineer is planning a meeting tomorrow about data accessibility.

Instructions: Read the text below.

- Engineer:** There is something important to discuss. I am planning a meeting to talk to the CEO, but I need some help.
- Manager:** How many representatives do you need?
- Engineer:** Well, there are five assistants who want to help me out and there are many data queries I need to check.
- Manager:** Perfect! Betty, how much time do you need to send an email to all our representatives?
- Betty:** Sir, representatives are receiving an invitation tomorrow.
- Manager:** Great! Now, what are you planning to explain in the meeting?
- Engineer:** Well, behind the multiple aspects that we have, there are others that we have to take into consideration.
- Manager:** How many aspects are there?
- Engineer:** There's Data Accessibility. We are planning to explain data accessibility as those activities we relate to storing and creating reliable databases.
- Manager:** How many facts can you list about data accessibility?
- Engineer:** Well, there are some main facts in accessibility. First of all, data accessibility has to be reliable, assistances are working on the availability of information next week and they are using an e-commerce application next month, so they can have information updated 24 hours, 7 days a week.
- Manager:** How much time and effort is necessary to accomplish that?
- Engineer:** It is taking 24/7 but it is not taking too much effort next month with the application. The company is acquiring a robust system next Monday. We are also mirroring the database on multiple servers; and we are planning to create a backup on July that contains all the information we are storing and updating concurrently.
- Manager:** How many procedures does the organization need to restore data?
- Engineer:** There are just two procedures. There is an onsite backup procedure and there's an offsite backup procedure for restoring data.
- Manager:** Great! So I'm seeing you tomorrow at the meeting!

Let's Practice!

There are some misunderstandings* about the concept of data accessibility.
*"Misunderstanding" refers to something you don't understand.

Instructions: Classify the sentences by writing the number of the sentence in the correct category.

The engineer is planning to explain Data Accessibility as....	The engineer is NOT planning to explain Data Accessibility as....

1. A tool assistants are using next week to create reliable databases.
2. An activity assistants are doing next week for filtering and storing data.
3. A useful tool assistants are using next year.

Let's Practice!

How many facts can you list about data accessibility?

Instructions: Proofread the sentences. Correct the mistakes. Read the sentences aloud. Check your pronunciation with your instructor.

1. There are reliability in data accessibility.
2. There is assistants working on availability of information.
3. Here is an application ready to update information.

Extension Activity

Let's write about data accessibility!

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Search information about data accessibility.
- Write a conversation where you explain the definition of data accessibility.
- Include how many processes there are in accessibility.
- Proofread your conversation to check spelling.
- Share your conversation with your instructor.

Self-Assessment

Yes

No

- I search information about data accessibility.
- I identify the definition of data accessibility.
- I recognize some main facts about data accessibility.
- I share my conversation with my instructor.

☐ ☐
☐ ☐
☐ ☐
☐ ☐

Target Words

- **data queries** (noun): requests of information from a database
e.g. Well, there are five assistances who can help me to check the data queries.
- **e-commerce** (noun): online application for storing information
e.g. Well first of all, data accessibility has to be reliable, assistances are working on the availability of information; they are using from next month an e-commerce application, so they are having updated information 24 hours, 7 days a week.
- **onsite** (noun): internal
e.g. There are just two procedures. There is an onsite backup procedure and there's an offsite backup procedure for restoring data.
- **concurrently** (adverb): at the same time
e.g. We are planning to create a backup of all the information we are storing and updating concurrently.
- **backup** (noun): copy of information you use for security purposes
e.g. We are planning to create a backup of all the information we are storing and updating concurrently.
- **mirror** (verb): to create and maintain copies of a database
e.g. The company is acquiring a robust system that is reliable, we are also mirroring the database on multiple servers.

Learning Points

There is – There are / How much? – How Many with Countable and Uncountable Nouns

You use **there is - there are** to express the existence of something

You use **How much – How many** to ask for the existence of something

You use **there is** with singular nouns or uncountable nouns that are the ones you cannot count unless you have a specific unit of amount.

Use the following structure:

There is + singular noun / There is + uncountable nouns

Example:

There is a database that includes all the information.

There is information on data accessibility.

Uncountable nouns are always singular so you use **"how much"** to ask for a particular amount, following this structure:

How much + uncountable noun + complement +?

*For example: **How much** money do you need to store data?*

On the other hand, you use **there are** with plural or countable nouns, using the following structure:

There are + plural nouns / There are + countable nouns

*Example: **There are** three programmers working on database access.*

Countable nouns are always plural so you use **"How many"** to ask for a specific quantity, following this structure:

How many + countable noun + complement +?

For example:

How many assistances do you need to store data?

Examples

- *There is something important to discuss.*
- *How many representatives do you need?*
- *Betty, how much time do you need to send an email to all our representatives?*
- *There are different things that we have to take into consideration.*
- *How many aspects are there?*
- *How many facts are there in accessibility?*
- *How much time an effort it is necessary to accomplish that?*
- *How many procedures the organization need to restore data?*
- *There are just two procedures.*

Learning Points

Present Continuous for Plans in Affirmative

You use **present continuous to describe plans or events you have for a near future.**

You use present continuous for plans in a near future using the same affirmative structure:

Subject + Verb To Be (am- are – is) + Verb- ing + Complement

Don't forget to use the verb **Be** according to the subject .

I - **am**

You - **are**

He-She-It - **is**

We - **are**

They – **are**

*Example: She **is planning** a meeting tomorrow to talk about data accessibility.*

Examples

- *I am planning a meeting to talk to the CEO, but I need some help.*
- *Sir, representatives are receiving an invitation to come.*
- *We are planning to explain data accessibility as those activities we relate to storing and creating reliable databases.*
- *We are planning to explain data accessibility as those activities we relate to storing and creating reliable databases.*
- *The company is acquiring a robust system that is reliable, we are also mirroring the database on multiple servers; and we are planning to create a backup of all the information we are storing and updating concurrently.*
